

# GAIA-CLIM H2020 project overview

Characterizing satellite measurements using in-situ,  
ground-based and sub-orbital capabilities

May 2015

Peter Thorne

With thanks to Anna Mikalsen, Fabio Madonna, Karin Kreher, Jean-Christopher Lambert, Bill Bell, Joerg Schulz, Martine de Maziere

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Genesis

First H2020 call had a program call EO3 which stated:

*“The proposal is expected to lead to significant advances in greater consistency and cross-calibration/validation of long term space based measurements with ground-based historical references, providing a better overview of uncertainty of available data to generate Climate Data Records, including impacts information of space data. Based on the work done, best practices regarding calibration/validation campaigns should be promoted.”*

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Proposal ethos

- A group led by several of the leads of GRUAN, NDACC and TCCON drafted a proposal concentrating upon:
  - High quality measurement networks
  - Traceability and uncertainty quantification
  - Delivering user tools

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Toy example

A lidar – red points

A satellite – black line

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Toy example series

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Measurement A $\neq$ Measurement B

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Project rationale

- To date satellite to in-situ comparisons have been ill-posed if we desire definitive answers.
  - Comparing two imperfect measures of a non-coincident snapshot of a fluid dynamical system they will always differ.
  - Q. Does that difference matter?
- To answer that need to fully understand at least one of the two measurements and the expected geophysical difference arising from non-coincidence.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Establishing Uncertainty

- Official BIPM terminology (VIM/GUM) is applied, e.g., uncertainty is used instead of often misused error and accuracy
  - Important to distinguish contributions from systematic and random effects in the measurement
- A measurement is described by a range of values
  - $m$  is corrected for known and quantified systematic effects
  - $u$  is random uncertainty (generally assumed gaussian but does not need to be)
  - generally expressed by  $m \pm u$

## Literature:

- Guide to the expression of uncertainty in measurement (GUM, 1980)
- Guide to Meteorological Instruments and Methods of Observation, WMO 2006, (CIMO Guide)
- Reference Quality Upper-Air Measurements: Guidance for developing GRUAN data products, Immler et al. (2010), Atmos. Meas. Techn.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Focus on reference in-situ observations

In the GCOS Reference Upper Air Network, a reference observation is defined as having the following characteristics:

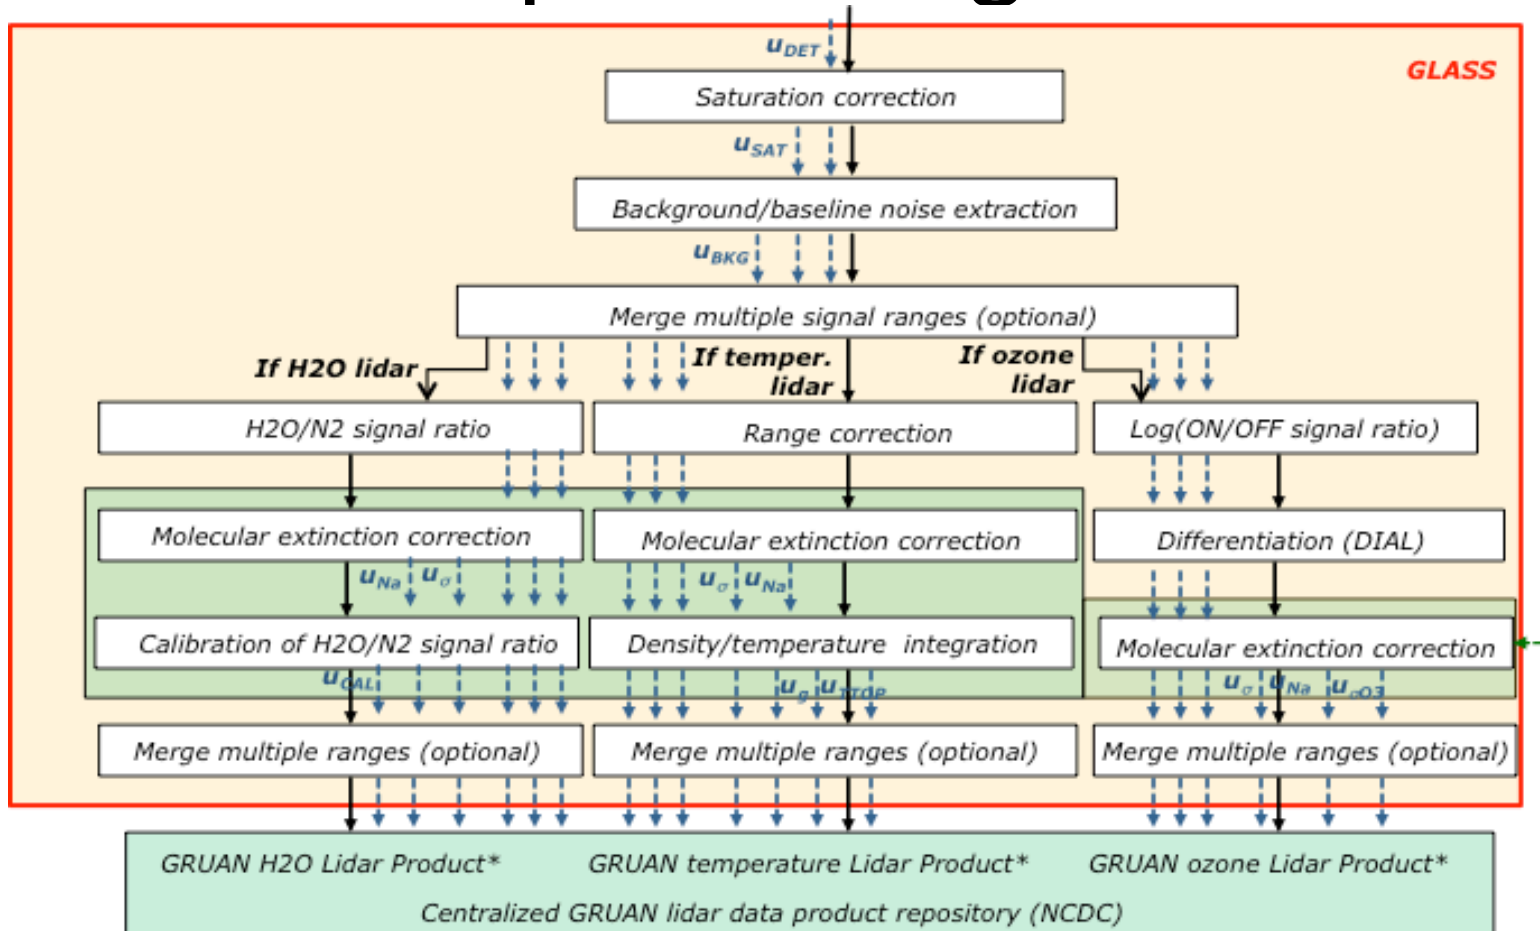

- ✓ Is traceable to an SI unit or an accepted standard
- ✓ Provides a comprehensive uncertainty analysis
- ✓ Is documented in accessible literature
- ✓ Is validated (e.g. by inter-comparison or redundant observations)
- ✓ Includes complete meta data description

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Lidar processing

Courtesy T. Leblanc, NASA JPL

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

\* Product is tailored to user need and/or science application (determined by time and vertical sampling options)

# Example : Ny-Ålesund, water vapor (courtesy T. Leblanc)

**7-hour average  
(daytime, winter)**

*Left plot:*

*Red, purple and blue solid lines:  
lidar, individual ranges*

*Black solid line:  
lidar, combined ranges*

*Black dotted line:  
lidar, total uncertainty*

*Red, purple and blue dashed lines:  
lidar, vertical resolution, in meters  
(NDACC-standardized)*

*Grey dashed line:  
co-located radiosonde*

*Right plot:*

*Solid lines:  
Combined Uncertainty*

*Dotted, dashed, dash-dotted, etc. lines:  
Individual uncertainty components*

➔ **Example of suitable GRUAN product for climatology and trends**

*Raw lidar data provided by  
Christoph Ritter,  
AWI, Potsdam*

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Lidar measurements with uncertainties

Annual series

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# But what about the satellite?

- In the absence of other information a useful test is whether the satellite is performing within design build specification ...
- But I'd rather be using

**F**iduceo

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Satellite measurements with design specification ranges

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Consistency for perfectly co-located measures

- Reference quality in-situ ( $m_1$ ) and satellite measurements ( $m_2$ ) should be consistent:

$$|m_1 - m_2| < k\sqrt{u_1^2 + u_2^2}$$

- ✓ No meaningful consistency analysis possible without uncertainties
- ✓ if  $m_2$  has no uncertainties use  $u_2 =$  satellite instrument specification

$ m_1 - m_2  < k\sqrt{u_1^2 + u_2^2}$	TRUE	FALSE	significance level
k=1	consistent	suspicious	32%
k=2	in agreement	significantly different	4.5%
k=3	-	inconsistent	0.27%

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Co-location uncertainties

0:30:00

0:00:01

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Consistency in a finite atmospheric region

- Co-location / co-incidence matters and inflates the expected difference
- Determine the variability ( $\sigma$ ) of a variable ( $m$ ) in time and space from measurements or models
- Two observations on different platforms are consistent if

$$|m_1 - m_2| < k\sqrt{\sigma^2 + u_1^2 + u_2^2}$$

- ✓ This test is only meaningful, i.e. observations are co-located or co-incident if:

$$\sigma < \sqrt{u_1^2 + u_2^2}$$

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# From theory to practice

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP1: Mapping capabilities

- Define tiers of data quality based upon their characteristics through extension of the CORE-CLIMAX maturity matrix to measurement qualities such as traceability, measurement metrological maturity and sustainability
- Map these capabilities
- Provide mapping tool to visualize the capabilities
- Assess geographical gaps in capabilities

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

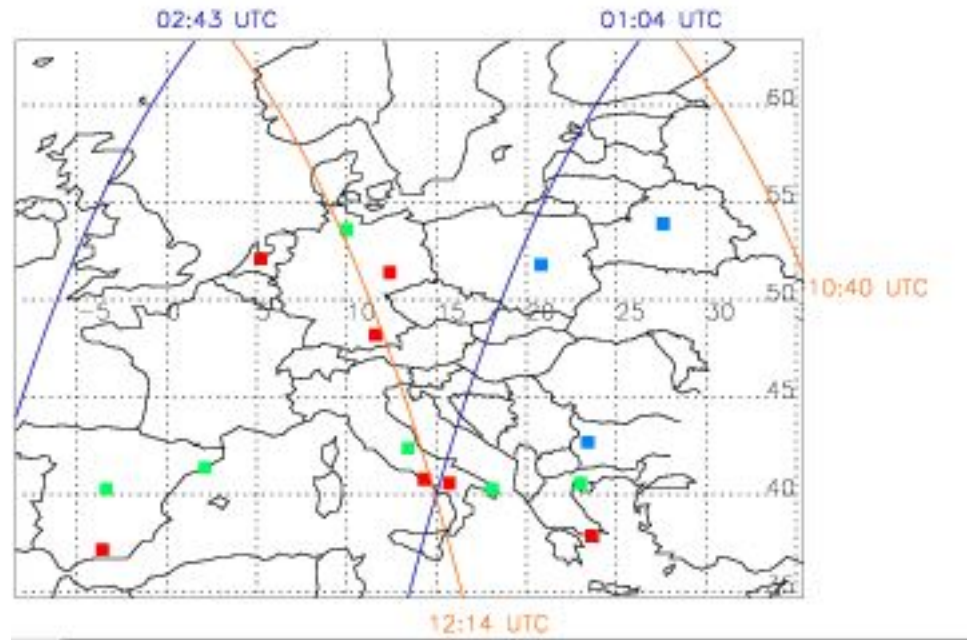

# A tiered system of systems approach

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Visualize observational capabilities

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP2: Quantifying measurement uncertainties

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

Instruments / programme	T	q	CO <sub>2</sub>	CH <sub>4</sub>	O <sub>3</sub>	Aerosols	CO	HCHO	NO <sub>2</sub>
Pre-existing / already in process on GAIA-CLIM timescales									
Radiosondes (RS92 and various others)	■	■							
Frostpoint hygrometer sondes		■							
Ozonesondes					■				
QA4ECV project (various instruments)							■	■	■
Planned in GAIA-CLIM									
Lidars	■	■			■	■			
Microwave radiometers	■	■							
FTIR / FTS		■	■	■	■				
UV/visible spectroscopy					■				
MAX-DOAS/Pandora					■				
GNSS-PW		■							

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

From the complete list of key ECVs targeted within this project (see table on previous slide), a subset of ECVs measured with techniques mature enough to be very likely candidates for data streams of reference quality has been selected:

- **Microwave Radiometers:**  
T and H<sub>2</sub>O profiles

- **Fourier Transform Spectrometers:**  
CH<sub>4</sub>, CO<sub>2</sub>, O<sub>3</sub> and H<sub>2</sub>O  
columns and profiles

- **LIDAR:**  
Aerosol, H<sub>2</sub>O, O<sub>3</sub> and T profiles

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

- **UV/visible spectroscopy:**  
**O<sub>3</sub> total column**

- **MAX-DOAS/PANDORA:**  
**Tropospheric O<sub>3</sub>**

- **GNSS:**  
**H<sub>2</sub>O total column**

**To achieve reference quality, we need to establish full traceability and uncertainty quantification for each instrument type and a clear definition of measurement protocols.**

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP3: Measurement mismatch uncertainties

- Satellites and other measures will never measure the exact same volume over the exact same interval.
  - Differences in time of observation
  - Differences in horizontal geolocation
  - Differences in vertical registration
  - Differences in vertical smoothing
  - Differences in horizontal smoothing
  - Vicarious data issues such as cloud impacts if comparing to radiances in the IR spectrum.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# What is a co-location mismatch ?

Sampling (time, space) AND smoothing differences !

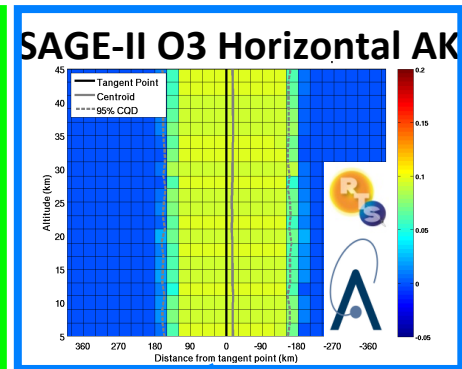

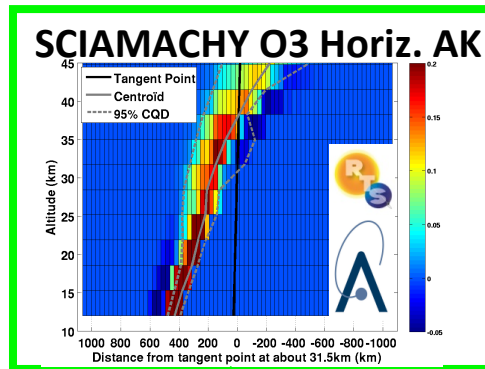

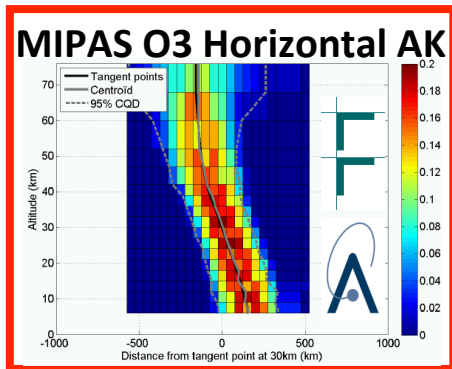

$$\epsilon_{smoothing} = f\left( (A_1 - A_2) \cdot S_{atmos.} \cdot (A_1 - A_2)^T \right)$$

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Horizontal smoothing examples

Vandenbussche et al., Lambert et al., GEOmon TNs, 2011

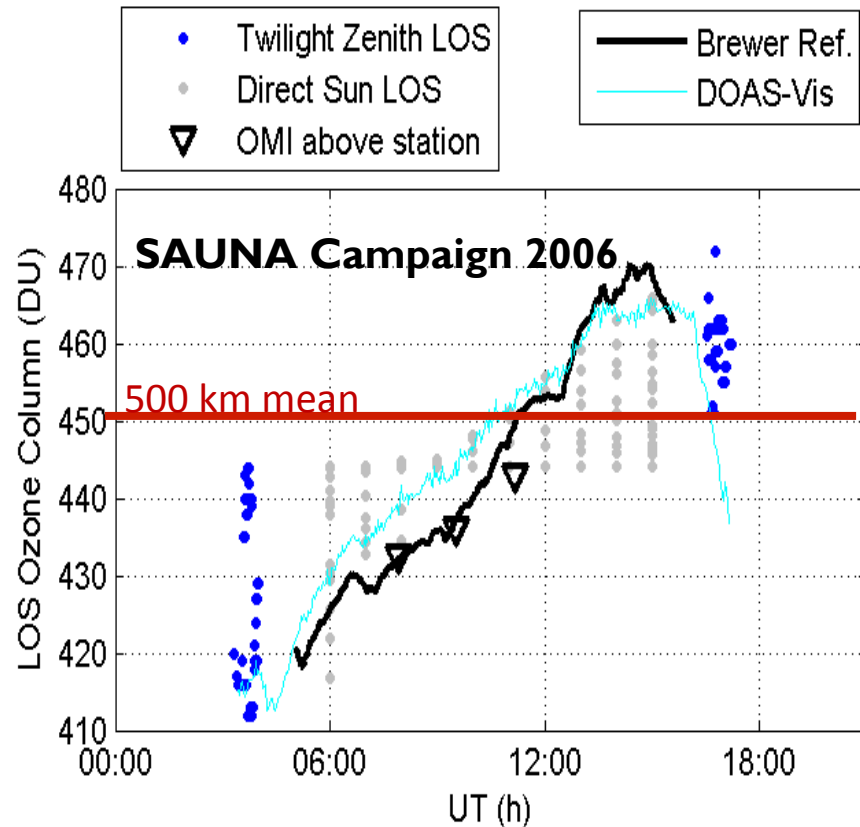

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Optimization of co-location criteria

## Diurnal change, smoothing difference or real bias?

OMTO3 daily mean around Sodankylä

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP4: Use of data assimilation as integrators

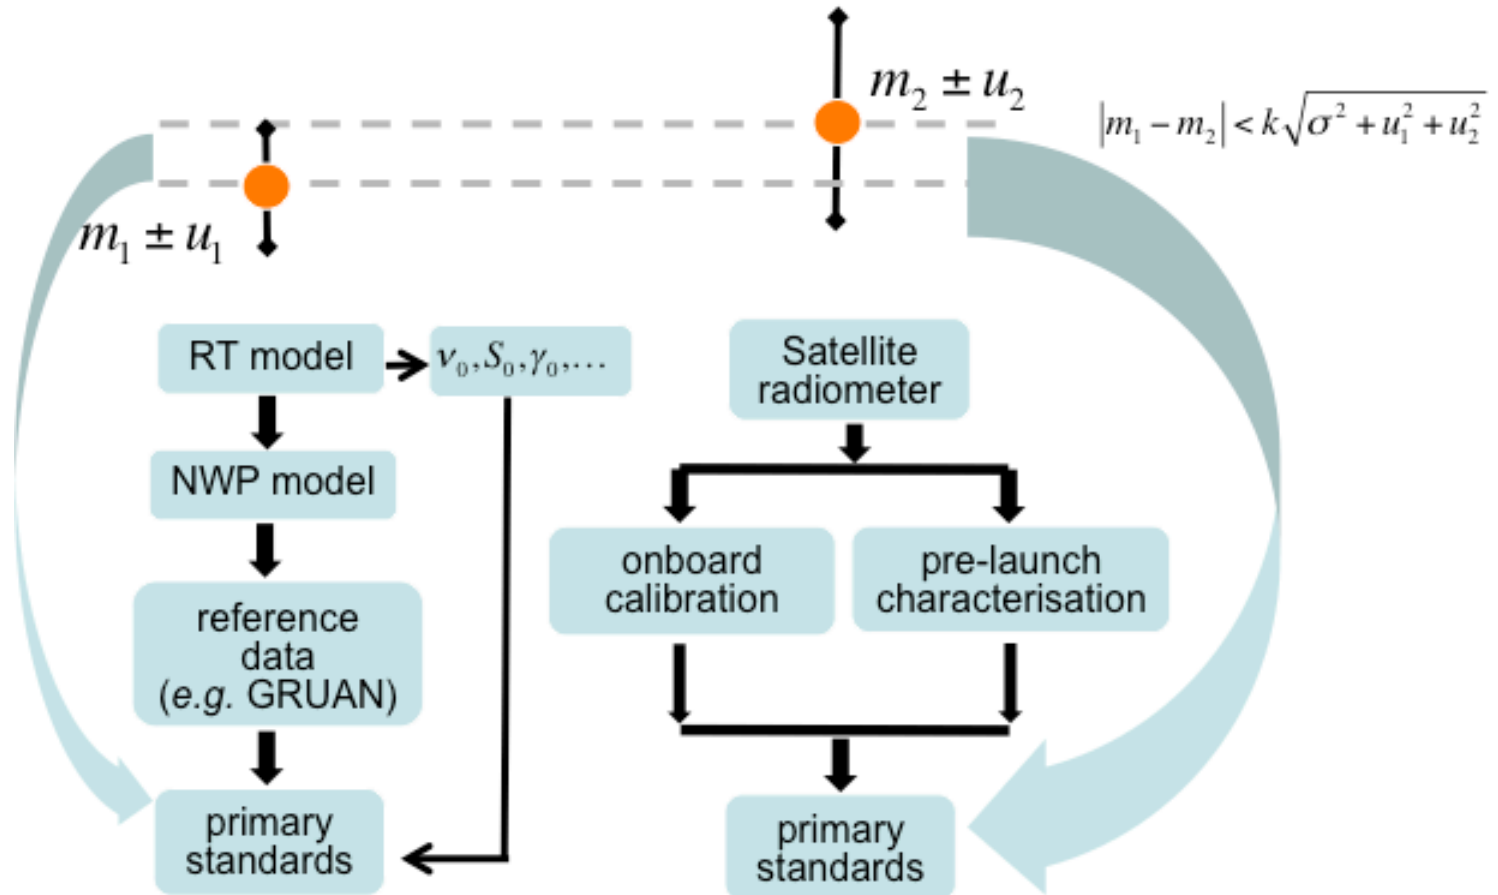

- Investigate the value of use of data assimilation and reference quality measurements
  - Constrain / better understand biases in data assimilation
  - Propagate information from point measures to more regionally / globally complete estimation
  - Use in both NWP and reanalyses to be investigated

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Validation of EO data: Idealised case 'observation space' validation

REFERENCE DATA

EARTH OBSERVATION DATA

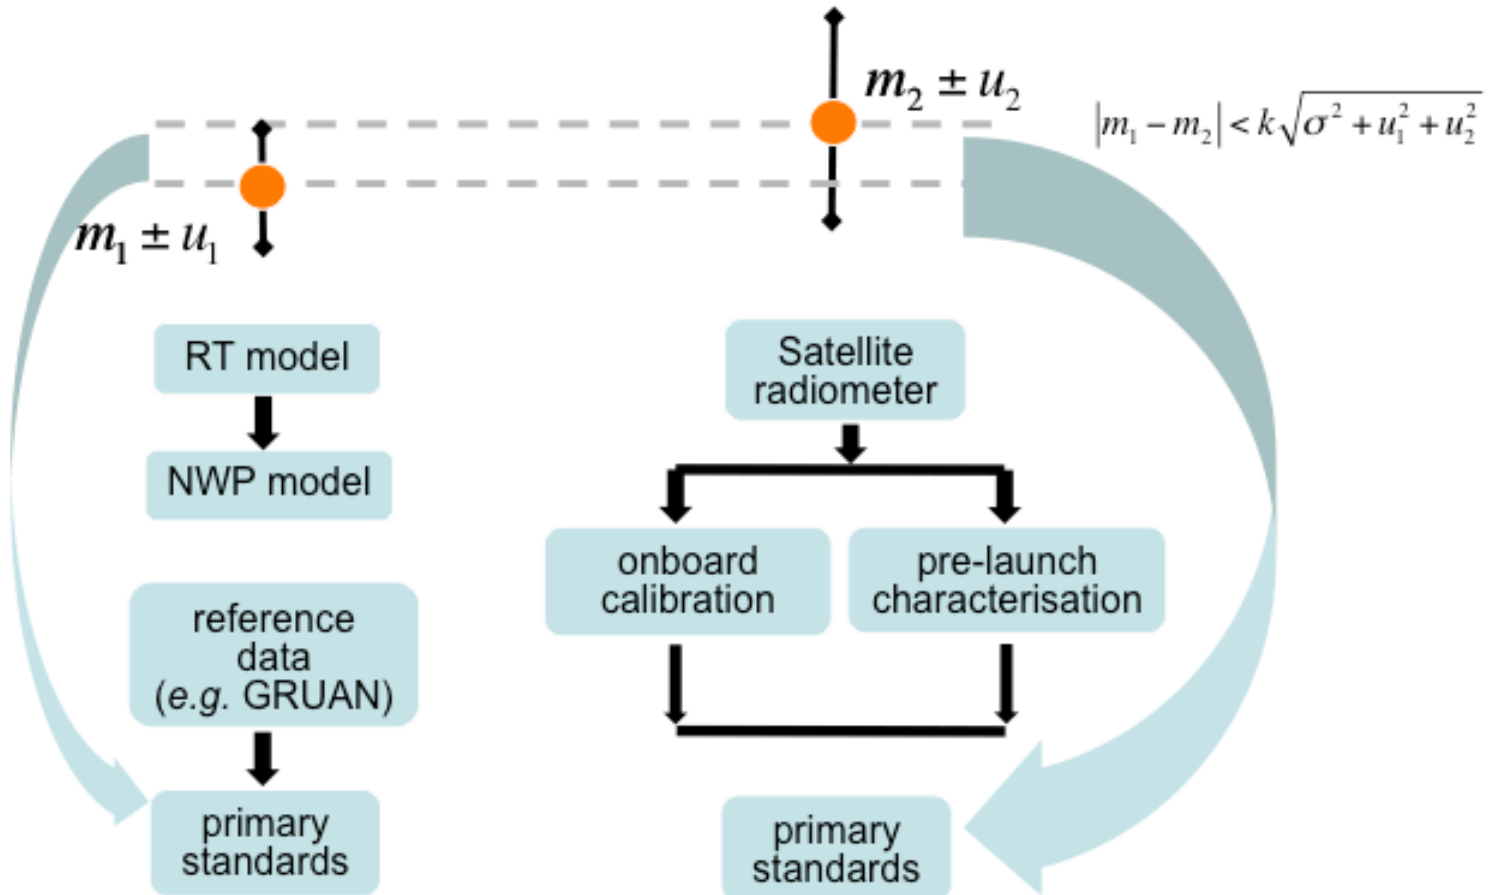

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Validation of EO data: Current situation

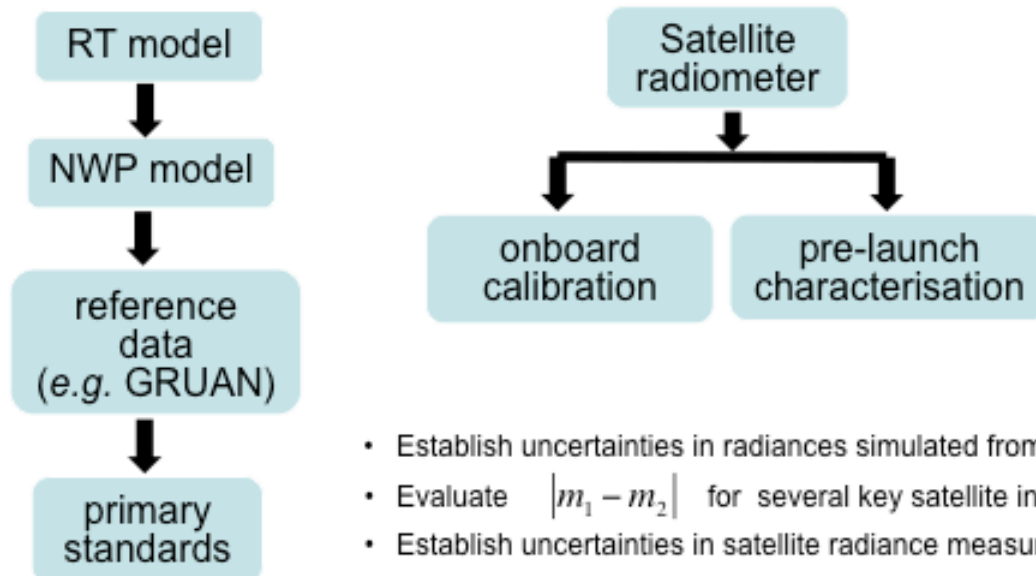

## 'observation space' validation

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Validation of EO data: What can we achieve in GAIA-CLIM WP4 ?

- Establish uncertainties in radiances simulated from NWP
- Evaluate  $|m_1 - m_2|$  for several key satellite instruments
- Establish uncertainties in satellite radiance measurements

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Analysed Frequency Shifts for AMSU-A: NWP Model Dependence

Similar results obtained  
From 4 NWP models  
(ECMWF, UKMO, NCEP,  
CMA)

Lu and Bell, JTECH, 2014

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Frequency shifts with time e.g. AMSU-6

AMSUA-6

Triangles – old PB  
Circles – new PB

Uses ERA-Interim analysis fields

Reduced seasonal cycle in obs-model misfit

Reduced inter-satellite biases & obs-model biases

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP5: Virtual observatory

- Make the outcomes of previous WPs useable and actionable
  - Collocation database build
  - Availability of Level 1 (radiance) / 2 (geophys retrieval) satellite to in-situ data comparisons including uncertainties
  - Graphical display and user interface
  - Build with expectation of becoming a sustainable

service

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Graphical Analytical User Interface

There is a lot to choose from but  
challenging to figure out what users  
need/want?

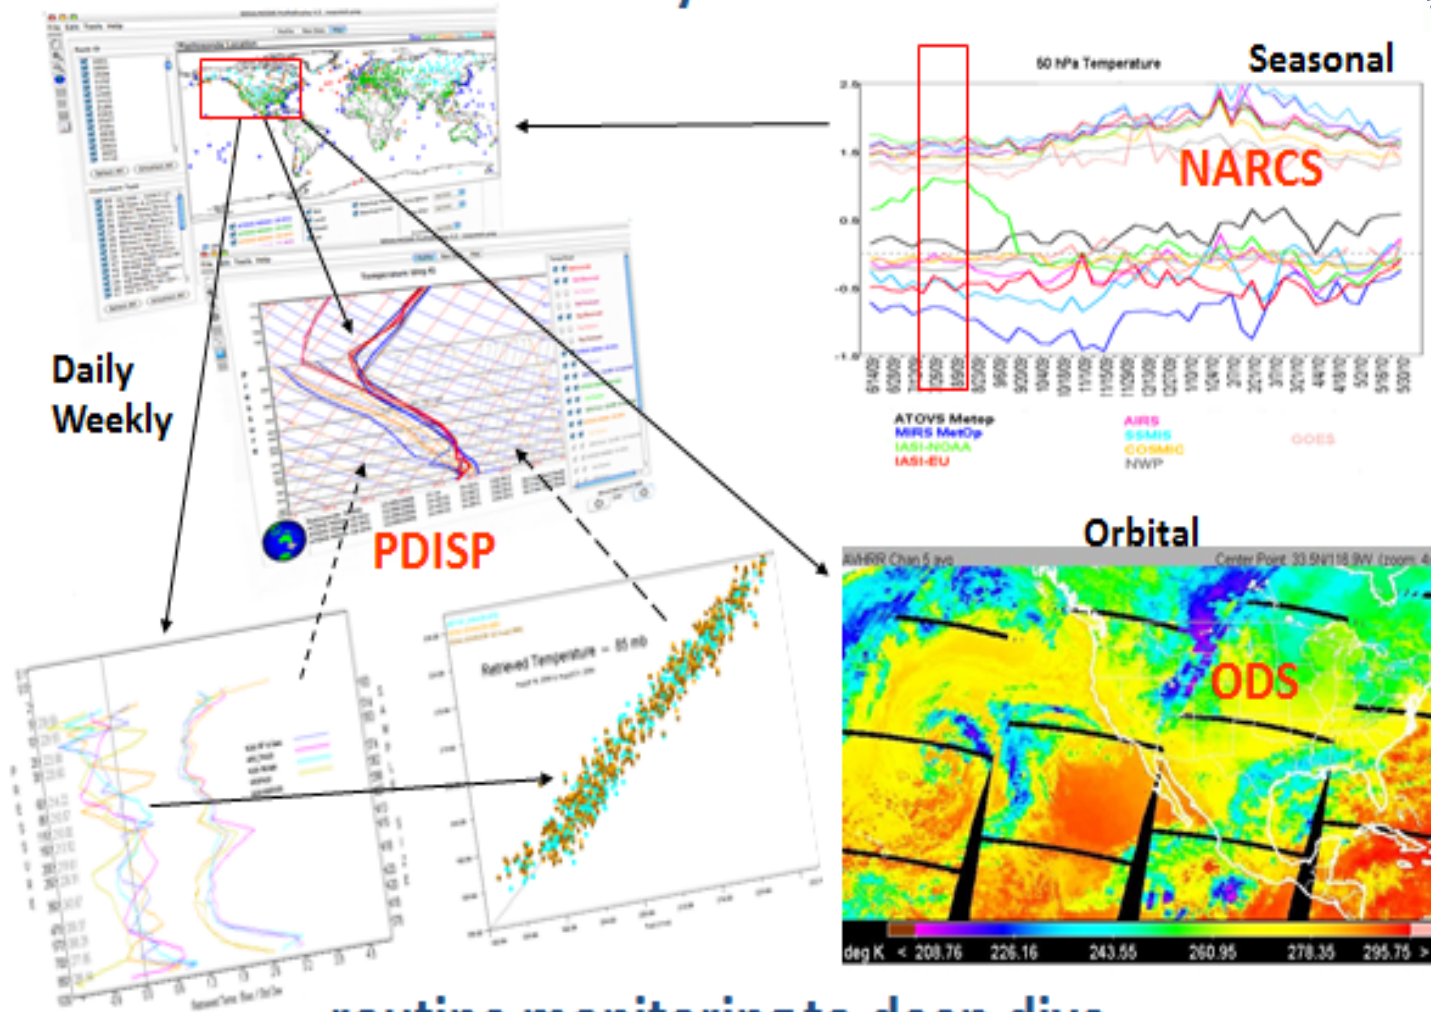

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# EDGE Analytical Interface ...

... routine monitoring to deep dive

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# 547 hPa Specific Humidity Comparisons

Courtesy Rob Kursinski, MOOG

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Global Gridded Products

## Multi-sensor browse interface

<http://www.icare.univ-lille1.fr/browse>

- A user-friendly interface where multiple products can be displayed over the user-defined region of interest
- Top-down selection (Product>Date>Region) coupled with transverse selection (i.e., modify date or product or region selection)
- Orbit tracks overlay available
- X/Y comparison plot available
- Link to AERONET sunphotometer database
- Some models and analyses are available (e.g., MACC aerosol forecast)

The screenshot displays a web-based interface for browsing satellite and model data. On the left, a sidebar contains a list of products including PARASOL/POLDER3, MODIS, Geostationary, CALIPSO IR/WFC, CALIPSO/CloudSat Profiles, OMI, and Ancillary. Below this is a 'Spatial subsetting' section with input fields for North (45.0432), West (5.184), East (38.016), and South (29.8368), along with buttons for 'Apply Zoom Selection', 'Current Bounds', 'Zoom out', and 'Full images'. There are also radio buttons for 'Small size', 'Medium size' (selected), and 'Large size', and a 'Date' field set to '2010\_02\_18'. At the bottom of the sidebar are buttons for 'Apply Product/Date Selection', 'Reload all images', 'Plot X/Y comparison', and 'Reset'.

The main area shows four panels of data over a map of the Mediterranean region:

- PARASOL OC2 Daily Aerosol Optical Depth over ocean:** A color-coded map showing aerosol optical depth over the ocean, with a color scale from 0 to 0.6.
- Aqua/MODIS RGB:** A satellite image showing the true color of the region, with a label for 'AERONET' and a specific site 'Santa Cruz, Tenerife' with coordinates and timestamps.
- MSG/SEVIRI AER\_OC Daily Mean Aerosol Optical Depth over Ocean:** A color-coded map showing the daily mean aerosol optical depth over the ocean, with a color scale from 0 to 2.
- ECMWF GEMS/MACC-AER 12-hr Forecast - Total Aerosol Optical Depth 550nm:** A color-coded map showing the 12-hour forecast of total aerosol optical depth at 550nm, with a color scale from 0 to 0.6.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

### NORS Report: MACC fnyp vs NORS MWR - O3

#### MACC vs NORS O3 - Intercomparison Statistics

f (predicted variable)	MACC O3.COLUMN [Pmolec/cm2]
o (observed variable)	NORS O3.COLUMN [Pmolec/cm2]
# measurements	1035
median bias	137.581
B (mean bias)	138.883
RMSE (root mean square error)	115.996
MNMB (modified normalized mean bias)	0.0405283
FGE (fractional gross error)	0.0439414
R (correlation coefficient)	0.975414
RS (Spearman rank correlation coefficient)	0.486943

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# WP6: Outreach and gaps assessment

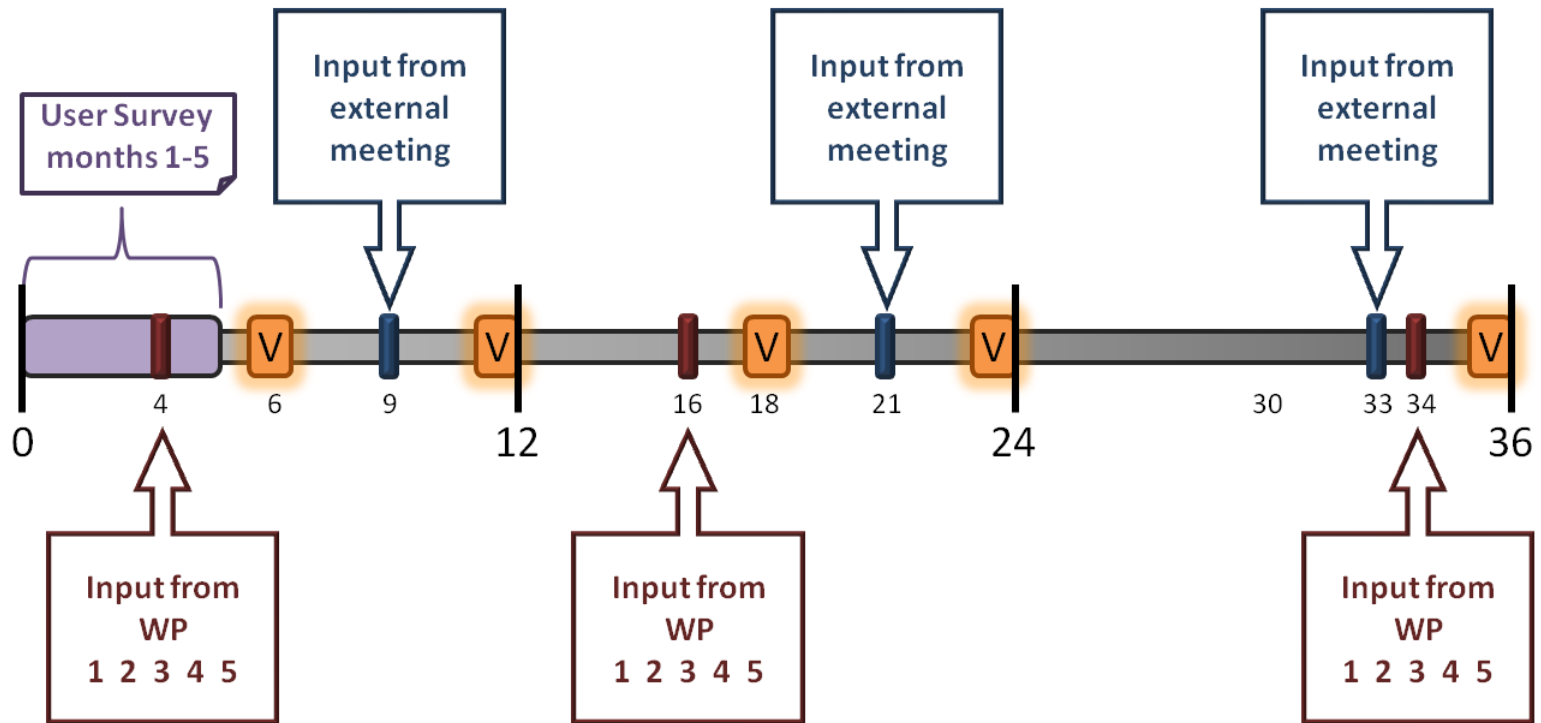

- Gaps in geographical coverage and their impacts
- Gaps in knowledge of measurement properties and uncertainties
- Gaps in understanding of the impact of measurement mismatches
- Open issues regarding how to use dynamical model and data assimilation techniques as integrators
- Issues that remain in enabling easy use of reference quality measures as cal/val tools.
- Gaps between user needs and current observational and analysis capabilities
- Consideration to the somewhat fractured nature of observing systems.
- Prioritisation of potential gap remedies and improvements in capabilities

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Gap assessment is iterative with community

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

- Define data quality attributes and map by capabilities
- Improve metrological quantification of in-situ ground-based and sub-orbital measurements
- Robustly quantify the impacts of inevitable measurement mismatches
- Use Data Assimilation to improve the usefulness of high quality measurements
- Provide useable and actionable information to end users to improve the value of both satellite and non-satellite data

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)

# Thanks for your attention

- GAIA CLIM User survey

<http://tinyurl.com/gaia-clim-survey>. *Deadline: June 15th !*

- only 10' work and we need to hear from you, **the users**, so we build something you will a. use and b. find useful

- Save the date:

GAIA-CLIM first user workshop, Rome, 6 Oct.

- focusing on

- ✓ user requirements for a Virtual Observatory
- ✓ uncertainties: terminologies and definitions, use of uncertainties, propagation of uncertainties, toolsets, level 1 uncertainties and their significance

*Suggestions are welcome*

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 640276.

[www.gaia-clim.eu](http://www.gaia-clim.eu)
